

Amare Safety Environmental Policy

Amare Safety recognises important role that we play in regard to ensuring that all of our activities are underpinned by improving the environment in which we operate in.

We will continually work on waste minimisation programs via the adoption of recycling processes and the use of renewable resources, which reduce our carbon foot-print. All of our investment decisions on plant and equipment will consider environmental impacts and sustainability.

Our suppliers are an integral part of our process and we will engage with service providers who utilize eco-friendly products and processes within their operations. We will encourage our suppliers at all times to actively minimise waste from within their operation.

At all times we will comply with Federal, State or Local Authorities laws and/or regulations for the protection of the environment.

All Amare Safety employees will be encouraged to actively seek ways in which they can improve sustainable work practices.
